

Important information for Mums and Dads

Feel Free To Take A Copy

Feel Free To Take A Copy

1. The Fukushima Nuclear disaster is much worse than you are being told.
2. Multiple nuclear reactors have melted down, and multiple fuel cooling pools that contained multiple old reactor cores have been vaporized, or are still exposed to the atmosphere.
3. Even after 5 years the Fukushima melted down reactor cores and exposed fuel pools are still releasing huge amounts of radiation into the atmosphere, and the Pacific Ocean!
4. Parts of Japan, Alaska, Canada, USA, plus parts of Eastern Russia have been contaminated with radioactive fallout and are still being contaminated by radioactive fallout from Fukushima. Large parts of the Northern Pacific Ocean have also been highly contaminated. (It is much worse now, as the map here is from June 2011!)
5. Radiation bio-accumulates particularly in meat, dairy and seafood, grown and harvested in radiation contaminated areas. **Ingested radiation from contaminated food radiates body cells with high doses of radiation for long periods of time.** What does this mean for your family's health and well being?

You must now make much more careful choices concerning where your food purchases come from. I suggest that you only consume food from non contaminated areas at present. This could change with time, so keep up to date, and informed on the subject. **The Food Lab**, has a list of the latest International reports of food contamination, <http://sccc.org.au/archives/2861> **Radioactive food contamination can take years to manifest as a serious illness.** Children and pregnant women are far more sensitive to the effects of radiation.

For an overall summary of the situation read <http://sccc.org.au/archives/2186> and also visit these sites <http://www.enenews.com> <http://fukushima-diary.com/> <http://www.fairewinds.org/fukushima> <http://nukeprofessional.blogspot.com.au/> and <http://enviroreporter.com/> plus read present and past articles. There is lots more info on the Internet, look up **Dr Chris Busby** and **Dr Helen Caldicott** Youtube videos on radiation.

For our families health and well being we need to collectively demand that, air, food, water, and goods be tested for radioactive contamination. If you don't demand it, it will not happen. *Politicians from all parties, and the media are now no more than puppets controlled by corporate big money. There is huge amounts of money tied up in the nuclear industry. You are constantly lied to. Controlled media plays down the seriousness of this disaster, and misinforms you.* **The info in this handout should be front page world news!**

Governments can't be trusted, they raise the so called safe radiation levels at will, as the radiation levels increase. **What is safe? No increase!** It is important for your families health and safety that you take the time, and effort to research this subject. Read the information at the web sites provided for starters. In summary, for your families safety only purchase food and goods from areas which are not contaminated. Research dietary systems that help remove, or protect your body from radioactive contamination.

This podcast on New Zealand radio station GreenPlanetFM explains the situation in great detail. The interview starts after a bit of an introduction on synchronicity.
