

## FUKUSHIMA IS HERE!

In March 2011 Fukushima Daiichi Nuclear Power Plant in Japan had **3** weapon production reactors meltdown, meltout and explode, with severe damage to several spent fuel pools.

Massive releases of man-made radiation continue to cover North America through ocean currents and contaminated rain from the daily jet stream. Japan is intentionally burning contaminated debris and dumping tons of highly radioactive water into the Pacific Ocean. There is also nuclear crisis in New Mexico at WIPP and Hanford in Washington state.
